Me And My Place In Space (Dragonfly Books)

Synopsis

Where is the earth?Â Â Where is the sun?Â Â Where are the stars?Now in a Dragonfly edition, here is an out-of-this world introduction to the universe for children.Â Â With earth as a starting point, a young astronaut leads readers on a tour past each planet and on to the stars, answering simple questions about our solar system. In clear language, drawings, and diagrams, space unfolds before a child's eyes.Â Â Colorful illustrations, filled with fun and detail, give children a lot to look for on every page and a glossary helps reinforce new words and concepts. A terrific teaching tool, Me and My Place in Space is an easy and enjoyable way to introduce the concept of space to the very youngest astronomers.

Book Information

Lexile Measure: 0570 (What's this?)

Series: Dragonfly Books

Paperback: 32 pages

Publisher: Dragonfly Books; unknown edition (July 20, 1999)

Language: English

ISBN-10: 0517885905

ISBN-13: 978-0517885901

Product Dimensions: 9 x 0.1 x 9 inches

Shipping Weight: 4.8 ounces (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 starsÂ Â See all reviewsÂ (25 customer reviews)

Best Sellers Rank: #43,426 in Books (See Top 100 in Books) #22 inÂ Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Aeronautics & Space #35 inÂ Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Astronomy #805 inÂ Books > Children's Books > Science, Nature & How It Works

Age Range: 3 - 7 years

Grade Level: Preschool - 2

Customer Reviews

We use this book and its predecessor, Me On The Map, to teach map concepts in First grade. Children this age generally have difficulty with the "nesting" idea of these things--that you can be in a county, state, country, continent, on a planet, and in a solar system, all at once. These books do a good job of making this more tangible and easier to grasp. It is especially effective when students do a re-write following the reading and personalize it to their own place on the map.

My one year old daughter and I read this book at least once a day. She loves the illustrations-like the space suit with pop beads for the oxygen line. It is not too wordy, so she stays engaged, yet provides all the basic information about our solar system and planets. She can now identify the pictures of the moon and the earth by name and knows that earth is where she lives. An animal lover, she also likes that the cat journeys into space. My daughter and I often look at the night sky, and she knows the ASL signs for moon and stars. I think that is why she loves this book so much despite her young age. This is a wonderful introduction to basic astronomy, and has spurred me to order more books on space for us to share.

We got this book when my then 27 month old told me he wanted to be an astronaut (still not sure where that came from). Within 3 days he was quizzing me on the planets. That said, this is a great introduction and at 2 it was too hard for him to understand the concepts of galaxy, etc. He is now 2.5y and still loves this book, we have moved on to more detailed books but he loves to sit and read this one to his doll at night (much of it is memorized as his reading level is not this high yet). That said, I would not buy this for a child past Kindergarten and even then it would be based on their knowledge and ability level as it may be too easy. Pluto is still included but this book was published well prior to the 2006 change in status so maybe an update would be due. We often just skipped over it at first and now take it to discuss the dwarf planets.

Great illustrations, and informative non-fiction for preschoolers. I am a big believer in improving young children's vocabulary through non-fiction reading. This book series will help keep your youngsters' attention while you talk to him/her about the world around us. A couple sentences per page. If you want to read another science series with more reading and more detail, but still great illustrations try the "Let's read and find out science" series including "Why Frogs are Wet" and many others.

This is a great book for kids 4 years old and up. The illustrations are bright and colorful. The author presents an educational topic in an entertaining format for young children.

This book is a fun entertaining for a child and you will enjoy reading it together. Easy for them to read to you and beautiful artwork.

This was a great gift for a 6 year old. Our summer theme was aboutspace - especially nice as this book is about a little girl.

I ordered this book because I loved *Me on the Map*. This book was fine, but not really worth buying--just rent from the library. It isn't that there is much to criticize, although I understand some people's concern that Pluto is still listed as one of the nine planets. (I actually didn't mind because I was brought up on Pluto and prefer my children to remember it.) But it just wasn't that valuable as an addition to the library. Each planet is explained in order, with nice pictures and a couple easy facts which kids can appreciate. The distance away from the sun is included for each. But there is really nothing else. At the end the child asks the question is there could be another galaxy, solar system, planet, person like them, so kids get the point of the hierarchy. But I found that a kind of silly way to end the book. I wish it had been a little more informative.
