Best Sellers Rank: #40,283 in Books (See Top 100 in Books) #5 in Â Books > Children's Books > Education & Reference > Science Studies > Nature > Earthquakes & Volcanoes #33 in Â Books > Children's Books > Education & Reference > Science Studies > Earth Sciences #748 in Â Books > Children's Books > Science, Nature & How It Works

Age Range: 6 - 10 years

Grade Level: 1 - 3

Customer Reviews

Have used both in the classroom, prefer Time for Kids, better layout and graphics, better information. It stays away from the cartoon scene and sticks to science or whatever subject it is discussing. Always has great graphics, eye-catching, attention-getting. Good supplement to science class, geology or earth science. It's designed for 2nd to 4th grade, but truthfully is good even up until the 8th grade for average students.

I was looking for a story about volcanoes that my Pre-K children would enjoy and would tie in with my Baking soda sand/box volcano experiment. This book was just what I needed and my students love looking at the pictures, especially after our volcano experiment.

My three year old grandson is heavily into volcanoes and hot lava. He loves the book and carries it everywhere along with his blankie.

My 6 year old grandson has become fascinated with volcanoes. He has loved looking at all pics; being able to read parts of it(he' s in kindergarten). As a 42 year retired teacher , not only do I know how important reading is to children , but now most school testing is nonfiction. I was thrilled when he showed an interest ,and like the content and bright graphics in this book! Highly recommend:)

I purchased several of these books for my 7-year-old to help with his reading comprehension. I found the series of books to be well-written with easy to understand vocabulary. The illustrations add to the text and include great captions for the diverse types of pictures (photos, diagrams, maps)

My little "volcanologist" LOVES this book. He is only 2 1/2 but he is very into volcanoes! Perfect mix of information and fun! He has learned all different volcano facts and wants to read it every day!

My 3 year old niece enjoyed this book very much, she is into volcanoes right now. The photos, graphics and layout are very well done, and the science is age appropriate, informative but not overwhelming. I wanted to get her something other than a story book about a volcano, I'm delighted that she now knows the difference between active, dormant and extinct volcanoes.

Books for my grandson's interest in Science and the world about him. Great information on his level, which makes him want to read.
